

SATELLITE DELIVERED BUSINESS CONTINUITY

Nearly every business and public entity is dependent on their voice and data connection to the “outside world”. When that connection fails, either by natural disaster, man-made accident or hardware/software failure, the ensuing result can be disastrous. A recent study by a well known research group found that even “best in class” organizations can lose up to \$60,000 per hour during network downtime. For industries that are regulated and/or provide life-saving services, the cost can be much higher.

Don't Let This Happen to You

Human error accounts for the majority of annual outage events.

Natural disasters can interrupt primary connectivity in an instant.

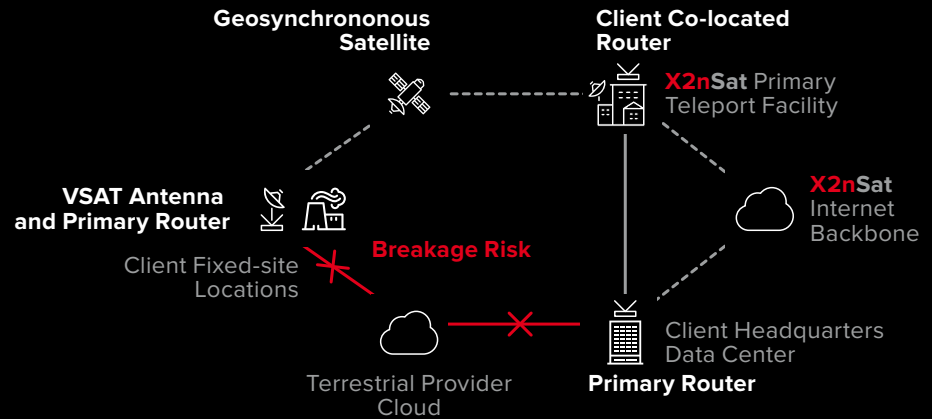

Satellite Delivered Business Continuity Services Provide Security & Peace of Mind By:

- Delivering a “path diverse” solution not dependent on the local telecommunications infrastructure
- Providing customized and secure backhaul solutions to match seamlessly with existing network infrastructure
- Enabling automatic failover for enterprise data, voice, real-time and other mission critical applications
- Utilizing highest priority SLAs for Business Continuity customers on multiple VSAT platforms
- Offering engineering services and turnkey dedicated satellite solutions, meeting the most stringent design requirements
- Delivering a fixed cost solution with no limitations on usage during extended outages or testing

Fixed-Site Business Continuity Solution

X2nSat’s solution automatically detects a primary connection failure and automatically switches the site to the 24/7 satellite back-up, allowing the site to continue fully functioning until the primary connection is restored.

The X2nSat Advantage

Serving the data needs of clients since 1996, X2nSat is a full Satellite Network Operator. X2nSat owns, operates and maintains multiple satellite networks that provide service anytime, anywhere. X2nSat provides enterprise solutions with the flexibility to meet specific customer needs.

In order to maintain 99.9% reliability, X2nSat owns and operates a domestic 24/7/365 Network Operations and Customer Response Center, located at its primary satellite gateway in Petaluma, California. X2nSat also maintains a separate, fully redundant gateway in Norcross, Georgia, with a third being established in New Mexico.

TO LEARN HOW X2NSAT’S BUSINESS CONTINUITY SOLUTIONS CAN BE AN IMPORTANT PART OF YOUR ORGANIZATION, CALL 707-664-5700 OR EMAIL SALES@X2NSAT.COM TO REQUEST A CONSULTATION.

Cost-effective Wireless Back-up With True Path Diversity:

- Fully-managed, single-source service with guaranteed 99.9% annual uptime
- Flexible platforms for efficiency and scalable mesh network designs
- Native QOS prioritization for data, voice (SIP), and RT applications
- Seamless IP transport for compatibility with all devices and protocols
- Turnkey provider for installation and support 24/7/365
