

SatBlue DATA by X2nSat

Today, healthcare organizations are increasingly relying on telecommunications to deliver the best possible patient care. Whether it is a specialist communicating with a remote facility via video conference, or sending medical records via broadband, facilities require fast and reliable connections to the outside world. And when a natural disaster or equipment failure interrupts the connection, a continuity plan to access records and treat patients is critical.

SatBlue Data, designed and delivered by veteran satellite network operator **X2nSat**, provides data continuity solutions tailored specifically to the healthcare industry. These include data and internet redundancy, mobile health clinic connectivity, emergency response trailers, and other services based on your hospital's needs and requirements.

With network solutions focused on reliability, scalability, and responsiveness, SatBlue offers creative solutions that evolve with the needs of your organization. Protect your patients and your facilities by being ready when an interruption happens.

SatBlue DATA offers a variety of robust solutions to support data connectivity.

- Data/Internet Redundancy
- Mobile Health Clinics
- Trailers
- DR Data Center Colocation
- Telemedicine
- Special Events
- Emergency Response Vehicles

Cost-Effective Wireless Backup with True Path Diversity

- Native QOS prioritization for data, voice (SIP), and RT applications
- Seamless IP transport for compatibility with all devices and protocols
- Turnkey provider for installation and support 24/7/365

The **X2nSat** Advantage

Serving the business needs of clients since 1996, X2nSat is a full Satellite Network Operator. X2nSat owns, operates and maintains multiple satellite networks that provide service anytime, anywhere. X2nSat provides enterprise solutions with 99.9% reliability and the flexibility to meet specific customer needs.

X2nSat owns and operates a domestic 24/7/365 Network Operations and Customer Response Center, located at its primary satellite gateway in Petaluma, California. X2nSat also maintains a separate, fully redundant gateway in Norcross, Georgia, with a third being established in New Mexico.
