

## SatBlue FLEX by X2nSat

**SatBlue Flex** offers a unique and customizable voice and data solution for healthcare organizations. Choose the combination of services from SatBlue Voice and SatBlue Data that meets your needs, or allow us to customize a plan for you.

SatBlue Flex offers a custom business continuity/disaster recovery plan centered around your organization's needs and regulations, but not at a custom price. SatBlue Flex also enables you to start with the services most critical to your organization, and expand when the need for additional solutions arises.

**X2nSat** recently worked with the largest publicly owned healthcare company in the U.S. to customize their **SatBlue FLEX** solution. Services included PBX-voice redundancy with data capabilities, as well as independent and satellite phones. By identifying their risks and enabling them with backup connections, SatBlue FLEX ensures that the company can continue to operate effectively in the event of communication failure.

# Cost-Effective Wireless Backup with True Path Diversity

- Fully-managed, single-source service with guaranteed 99.9% annual uptime
- Flexible platforms for efficiency and scalable mesh network designs
- Native QOS prioritization for data, voice (SIP), and RT applications
- Seamless IP transport for compatibility with all devices and protocols
- Turnkey provider for installation and support 24/7/365

## The X2nSat Advantage

Serving the business needs of clients since 1996, X2nSat is a full Satellite Network Operator. X2nSat owns, operates and maintains multiple satellite networks that provide service anytime, anywhere. X2nSat provides enterprise solutions with 99.9% reliability and the flexibility to meet specific customer needs.

X2nSat owns and operates a domestic 24/7/365 Network Operations and Customer Response Center, located at its primary satellite gateway in Petaluma, California. X2nSat also maintains a separate, fully redundant gateway in Norcross, Georgia, with a third being established in New Mexico.
